

# OEC 9400 FULL-SIZE C-ARM

SKU: MP14836

Categories: [Digital X-Ray](#)

## Description

This mobile unit can meet your various orthopedic, general surgery, and pain management requirements. It is capable of fluoroscopy with normal and boost modes (0.2-5.0 mA and up to 20 mA, respectively) and can operate on continuous or one-shot basis. It can perform long procedures because of its rotating anode x-ray tube and quick cooling rate. Dual 17-inch video monitors display your images, and these images may be sent to a thermal printer or transferred through an external DICOM box.

When your needs increase and your practice is ready to move up to the next level, the GE OEC 9400 c-arm can expand and grow in usefulness with you. Specialty packages and options are available, including expanded surgical platforms and special procedure modules capable of higher frame-per-second rates. Optional pulse fluorography and fluoroscopy modes offer pulse rates of 1, 2, 4, or 8 pulses per second.
