Description

From low-dose imaging to an innovative, interactive approach to mamography, Senographe 800T Mammography system helps you redefine the patient experience. Senographe 800T Mammography system is durable and reliable. But is also designed it to deliver consistently outstanding image quality, so you can perform a wide variety of breast procedures in settings from in-office to mobile screening. The Senographe 800T System is Designed to Perform High Quality Screening and Diagnostic Mammographic Exams Using Different Projections and Magnification Factors. Exams May be Achieved With the Patient Sitting or Standing, Including Patients in Wheelchairs. As the pioneer in breast imaging for the last two decades, GE has continued to be a leader in mammographic innovation, introducing a number of technological breakthroughs - from the first rotating anode to the application of rhodium for enhanced image quality. In the process, Senographe has become the recognized leader, with the world's largest installed base of Mammography systems.
