

GE Senographe DS Mammography

SKU: MP15295

Categories: [Digital Mammogram](#)

Description

Senographe is one of the most versatile Mammography systems available, and the Senographe DS is no exception. With the addition of the stereotaxy option, you can perform interventional procedures in the same room and with the same system you use for screening and diagnosis.

The Senographe DS offers you flexibility and clinical choices to help manage your patients according to your preferences, with the same exceptional imaging you've come to expect from GE's Mammography systems. If you prefer a standard field of view system, the Senographe DS meets your needs. It is also an excellent addition to Mammography sites with multiple systems because it offers the flexibility of a different detector size.

This cost-effective system is quick and easy to set up, helping you to transition smoothly from conventional to interventional imaging. And that can lead to increased comfort and convenience for your patients and improved efficiency and productivity for you.
