

DryView Laser Imager (Double Tray)

SKU: MP22491

Categories: [Laser and Light Therapy Equipments](#)

Description

The CARESTREAM DRYVIEW 5950 or Trimax T55 Laser Imaging* System offers perfect integration of high diagnostic image performance and low costs. You get the proven advantages of DRYVIEW laser imaging technology, tabletop printing convenience and built-in mammography capabilities. Ideal for a full range of applications:

- Computed Radiology (CR)
- Digital Radiography (DR)
- Magnetic Resonance Imaging (MRI)
- Computed Tomography (CT)
- Ultrasound, CR and Full-Field Digital Mammography

System Benefits The powerful, yet space-saving DRYVIEW 5950 offers flexible, high-resolution laser printing for mammography and general radiography. High-Quality Laser Imaging

- High-resolution laser imaging at 508 pixels per inch
- Automatic Image Quality Control calibrates film and imager settings to user preferences

Intuitive User Experience

- DRYVIEW Daylight Load Cartridges allow users to load film quickly and easily in normal lighting conditions
- Innovative film loading design makes two sizes available on demand
- User interface makes operation easy and minimizes user training

Low Cost of Ownership

- Proven reliability contributes to productivity and affordability
- DRYVIEW technology does not use thermal print heads, requiring no daily or weekly maintenance on print heads or film transport rollers
- A built in Web portal allows users to view imager status and performance data from any workstation on your network

Built-in Mammography Capabilities

- No hardware or software upgrades needed to print high-quality, high-resolution images from Full Field Digital Mammography (FFDM) and CR-Mammography systems
- Mammography optimized capabilities include user-selectable test patterns and key control charting parameters and values
