

# Hyperbaric Oxygen Chamber Therapy (HBOT)

SKU: MP22759

Categories: [Electrosurgical Units](#)

## Description

### Product Details:

Minimum Order Quantity 1 Unit

Application Hospital, Home Purpose, Veterinary Purpose, Clinical

Condition New

Brand Oxyhealth Europe

Oem Service No

OxyHealth Hyperbaric Oxygen Chamber Therapy We are pleased to provide OxyHealth Europe Hyperbaric chamber which is used for medical, aesthetic, sports medicine and home use. Hyperbaric Oxygen Therapy (HBOT) is the medical use of oxygen in a pressurized environment, at a level higher than 1 atmosphere absolute (ATA). Increased pressure allows oxygen to dissolve and saturate more effectively in the blood system, primarily the plasma (independent of hemoglobin), which yields a broad variety of positive physiological, biochemical and cellular effects. Under these conditions, the lungs can gather more oxygen than would be possible breathing pure oxygen at normal air pressure. This non-invasive therapy is the most trusted way to increase oxygen levels to all organs of the body. The typical treatment lasts for 60-90 minutes, during which the patient lies down and breathes normally. One session of HBOT increases the oxygenation of the blood system by 50% and is equivalent to 1,400mg of Motrin without the toxicity. Benefits includes Oxygen increases stamina and endurance, physical stamina, detoxifies the blood, strengthens the immune system, destroys anaerobic, parasites, improves brain and memory functions, strengthens the heart, reduces inflammation, reduces tissue hypoxia, anti-infectious, promotes stem cell mobilization, improves neurological conditions. The machine is FDA and CE approved. (Source OxyHealth Europe) Service
