

Tynor OA Neoprene Knee Support - Small (Right Varus/Left Valgus)

SKU: MP26040

Categories: [Knee Support](#)

Description

Neoprene OA Knee Support is scientifically designed to provide counter force to correct varus or valgus thrust along with some offloading action. It helps to allay pain within a few weeks of use. It can also correct mild to medium varus or valgus deformity of the knee with a prolonged use. Lateral elasticized band : Provides counter force to correct varus or valgus thrust, allay's pain in osteoarthritis of knee and corects mild to medium vaurs or valgus deformity on prolonged use. Rigid bi-axial hinge : Good offloading action, free flexion movement, mimics the natural knee joint and support the cruciate ligament at all flexion angels. Neoprene layer bonded with nylon fabric on both sides : Four way stretch ability and compression, appealing aesthetics with color fastness, better body heat retention, faster pain relief and healing. Anterior opening design : Easy application and removal, good for even swollen or asymmetric knees, easy for geriatric patients and it allows customized compression, not possible in tubular products. Anti tourniquet bands : Ensures no constriction to blood flow and better grip of the product to the body. Anatomical shape : Ensures good grip around the knee and no bunching on knee bending.
