Categories: [Knee Support](#)

Description

Neoprene Knee Support Sportif is a designer support to provide firm compression, mild support and warmth to the knee joint, to allay pain and inflammation, generally associated with old age and arthritis. It is widely used during sports and for sports related injuries. Aesthetically designed : Double colored, pleasing looks, used for sporting activity and can be worn fashionably. Perforated at the rear : Ventilation improves patient comfort, no bunching on knee bending and trendy. Top and bottom bands : Allow a controlled compression, better grip of the product to the body and easier slide while wearing. Neoprene layer bonded with nylon fabric on both sides : Four way stretch ability and compression, ensures longer life, appealing aesthetics with color fastness, better body heat retention, faster pain relief and healing. Anatomical shape : Ensures good grip around the knee and no bunching on knee bending. Anterior patellar opening : Relieves patellar pressure and positions patella in patellar dislocations.
