Lightweight

Tremelo is lightweight. You can wear it on your arm to perform a variety of activities with ease and comfort. Tremelo stabilizes hands using innovative mechanical mechanisms by which a light weight vibrates within the device. This way we make technology do the work for you, not the weight.

Tremelo uses Tuned Mass Damper technology to mechanically stabilize tremors.

Tremelo has been shown to safely reduce arm shaking and improve fine motor skills for people with hand tremors. Simply, the wearable sleeve uses a built-in small mass that shakes back and forth against the tremor motion. Tremelo uses the principle of energy absorption — normally found to steady planes, bridges and tall buildings — to counteract the shaking in hands.

There are other hand-tremor devices in the research and testing stages, but none that uses the energy absorption concept which makes Tremelo a unique non-invasive device.
