

# Biocard Hepatitis B Surface Antigen (Dip Stick)

SKU: MP41064

Categories: [Laboratory Infrastructure](#)

## Short Description:

Biocard™ Hepatitis B Surface antigen in vitro diagnostic kit in dipstick method is based on the antigen capture assay for the detection of HBsAg in human serum/plasma by lateral flow immunochromatography method. All the accessories needed for the sampling and testing are included. Works on Serum/Plasma. Results can be obtained in 20 minutes

## Description

Biocard™ Hepatitis B Surface antigen in vitro diagnostic kit in dipstick method is based on the antigen capture assay for the detection of HBsAg in human serum/plasma by lateral flow immunochromatography method. All the accessories needed for the sampling and testing are included. Works on Serum/Plasma. Results can be obtained in 20 minutes Features

- Sample Type: Serum/Plasma
- Able to detect all 11 subtypes of HBsAg.
- Convenient pack sizes
- Simple to perform
- Results can be obtained in 20 minutes
- Needs no equipment
- Excellent sensitivity and specificity.
- Convenient storage between 4-30°C.
- ISO -13485 2012 and GMP compliant manufacturing process.
