

Neonatal Galactose

SKU: MP41078

Categories: [Laboratory Infrastructure](#)

Short Description:

Labsystems Diagnostics' Neonatal Galactose is a quantitative fluorometric test for the total galactose from dried blood spot samples. The test is based on the combined determination of free and galactose liberated from the cleavage of the galactose-1-phosphate.

Description

Labsystems Diagnostics' Neonatal Galactose is a quantitative fluorometric test for the total galactose from dried blood spot samples. The test is based on the combined determination of free and galactose liberated from the cleavage of the galactose-1-phosphate.
Benefits

- Excellent reproducibility
- Good agreement with CDC samples
- Excellent analytical sensitivity
