- These alcohol swabs are an important part of any first aid kit, as it helps to clean and disinfect cuts and scrapes

Description

The Romsons Alcohol Swab is a gauze pad that has been saturated with alcohol. These alcohol swabs are an important part of any first aid kit, as it helps to clean and disinfect cuts and scrapes. Its four-layer wrapper provides air-tight seal; prevents leakage and drying out as these alcohol swabs are saturated with 70% V/V Isopropyl Alcohol for optimum anti-bacterial action. These swabs are also used in doctor's offices, at shot clinics and any other place where quick, easy cleaning of an area is needed. The alcohol helps to rid the skin and other surfaces of potential sources of infection. The Romsons alcohol swabs are available in a standard packing of 1000 swabs per box.
